Instructions

Each hole does not have to be drawn to scale, but needs to accurately indicate hazards, their distances and details of each green.

You can measure the distances by pacing from markers on the course once you have calculated the distance of your paces accurately or a laser range finder can be used.

The blank template to print out has a small arc to indicate the front of the green, with a fairway extension running down the page.

On Par 4s and 5s, start your yardage book from the area where your drive normally lands. Include doglegs, out of bounds and other hazards.

Show the entire hole including tee boxes on par 3s.

Here is the suggested legend to use. You can print off and cut these symbols by clicking the links at the end of this ebook or simply use a pen to draw them on by hand.
Example hole
A -- draw in shape and length of green
B -- draw in slopes of green
C -- distance from front edge of green to clear hazards
D -- draw in slope of fairway
E -- distance from tee to clear hazards
F -- distance to front of green from landing area
G -- distance to center of green from landing area

Instructions

It will take 2 or 3 regular rounds to really get all the details or 1 or 2 if you can take your time by playing on a Monday afternoon.

On the 1st hole, hit the club you would regularly use. From the tee, pace off the distance to your ball, making note of the distance to any hazards. You may end up short of them, past them or equal to them. If the hazards are in front, continue pacing until you reach the start of the hazard. Identify the best part of the fairway to be in for your second shot and also make note of any trees, slope of the fairway, distance markers, etc.

You know the distance of the hole, so simply deduct the distance paced to give you a rough estimate of the distance to the green. Hit your second shot, then pace this distance. If playing a par 5, again pay close attention to hazards and the landing area. If playing a par 4, pay close attention to the layout and hazards around the green.

Pace the distance to the front edge of the green and also the center of the green from the location of your 2nd/3rd shot.

Once on the green, make a note of the shape, pace the distance from front to back and also front to middle. Make a note of the slope and also the safe part of the green, i.e flat. Note any bunkers or hazards around the green. Pace off the distance from the front of the green to clear any hazards.

After doing that for every hole -- when other players are hitting or any other spare moment -- you are ready to begin putting all the information down on paper. The best way is to take a white sheet of paper with the hole template on it and add the information in. When you have done that, cut the paper to fit a standard spiral flip style notebook and paste the paper on it.

If you refer to the card for the golf course, a rough outline of each hole should be provided to assist you.

The next time you play, the objective is to confirm the information you have written in your yardage book. Have you missed anything? Are the slopes of the greens correct?

Once you are happy with your yardage book, the next step is to play to it. If you know a second shot into a par 4 is risky from the right side of the fairway, don't do it. Put faith in your yardage book and your new found course management skills.
